Ref: Recommendation letter

To who it may concern,

We installed the Fitch Fuel Catalysts on our 10 large tuna super-seiners beginning in 2013 based on the positive results of 3 distinct independent evaluations performed on board and on electronic load banks.

The 1st, a field test, recorded an average 8.8% reduction in fuel consumption.

The 2nd test, using a dynamometer, reflected a horsepower increase of 3.25%, a torque increase of 7.64% and a fuel consumption decrease by 18.25-19.21% relative to the change in horsepower and torque.

The 3rd, a load bank test, showed an average reduction in fuel consumption of 4.8% over all four loads.

We are very satisfied with the benefits the Fitch Fuel Catalyst has provided for our vessels and plans to expand it throughout our worldwide operations.

Sincerely,

A handwritten signature in black ink, appearing to read "Thierry Le Guennec", is written over a circular blue stamp.
